WOOD  
FUEL  
PROCESSING  
INCORPORATED

# BARBECUBE

The natural wood briquets are specially developed for great outdoor cooking. The almond and fruitwood blend adds a delicious smoked taste and aroma to any barbecue. Your food literally drips with flavor — an honest flavor as hearty and untamed as the Old West.

## *Capture the delicious smoked taste of the Old West with BARBECUBE™.*

It's never been easier to be a grilling gourmet. We put all you need in one bag—briquets, starter and flavor. All we left out is the black charcoal mess.

The real wood briquets light quickly and are ready to use in record time. What's more, the natural fire starter won't ruin the taste of your food.

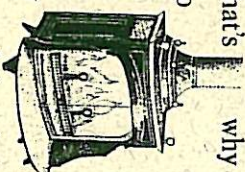

BARBECUBE is an "earth friendly" product made from renewable orchard wood residuals, so conventional forest resources remain untouched.

# KINDLING CUBES

## *A Hot New Way To Light Your Fire*

We don't believe that gathering kindling and starting a fire should be a heated chore. That's why we've introduced a convenient way to buy, store and use kindling.

Kindling Cubes are compact cubes of easily combustible wood, specially designed to make starting a fire in a wood-burning stove, fireplace or campfire a more pleasant experience.

It's never been easier to start a blazing fire. Kindling Cubes are a unique blend of natural wood — softwoods for easy starting and hardwoods for longer burn time. The cubes are efficient, clean, economical and non-polluting.

Kindling Cubes are attractively packaged in convenient to use 25 pound bags with handles... Best of all, the biodegradable bags are burnable.

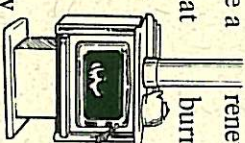

## *More Time To Have Fun*

*It's difficult to imagine camping, hunting or fishing without a campfire. However, campfire wood in a public campground is impossible to find. That's why we've introduced a natural wood product that's not only proven to provide an attractive campfire but is as easy to bring along as it is to use — Kindling Cubes.*

# CALIFORNIA WOOD PELLETS

California Wood pellets are a renewable source of home heating fuel that burns pollution-free and is clean and easy to handle. The 100% natural wood product is made to be used in pellet stoves, a recent and exciting energy innovation.

## *Enjoy the Warmth and Romance of Wood Heat without harming the environment.*

Consistent production of high quality pellets requires that raw material, particle size, moisture content and densification pressures be carefully controlled at all times. That's why we manufacture our pellets at the most complete and technically advanced wood processing facility in the state.

California Wood Pellets are made from renewable wood residues and contain no artificial additives. They are packaged in 30 pound biodegradable paper bags... easy to carry and convenient to use. You'll like the way they stack and store. In fact, we believe that you'll find California Wood Pellets stack up more favorably than any other pellets available today.
